

# F8 Alternative Solution Flowchart

## How to check if an Ecoglo S20 sign will meet F8 with an Alternative Solution

\* NZBC F6 definition for Risk Group C: a building with an evacuation time of less than 30 minutes, an occupant load no more than 1000, and whose occupants are not to remain in the building during an emergency.

### \*\* Effective management processes include:

- Lighting is switched on whenever the building's security alarm system is de-activated;
- Lighting is switched on by a conservatively programmed timer;
- A master switch is turned on by the first occupier that turns on all the required lighting;
- Lighting is switched on manually (only suitable for staff-only areas - staff induction requires first occupier to switch on lighting, and clear instruction signs are permanently located by all relevant light switches);
- Signs are outdoors and required viewing distance is 50% of the signs rating.
